

Jake Reeves

Atlanta, GA | 215-730-3757 | jaketreeves@gmail.com | www.linkedin.com/in/jake-reeves-4298ab317

Motivated Computer Science student seeking a Software Engineering or modern Web Development internship with hands-on experience building real-world applications and backend systems using Python and Java. Strong foundation in object-oriented programming and data processing, with practical project experience in data-driven applications and backend web development. Eager to contribute to real-world projects while continuing to grow as a student developer.

Technical Skills

Languages:

- Python
- Java
- HTML
- CSS
- JavaScript (basic)

- React (basic / learning)

Core Concepts

- Object-Oriented Programming(OOP)
- Web Development Application
- Data Structures
- RESTful API Design

Frameworks/Libraries:

- Django
- Django Rest Framework

Tools/Technologies:

- Git
- SQLite

EDUCATION

Clark Atlanta University, Atlanta, GA

Bachelor of Science in Computer Science

Relevant Courses: Programming Principles II, Data Structures

Expected Graduation 2028

GPA: 4.0

EXPERIENCE

Easy Tech Solutions

Backend Web Developer - Intern

Monrovia, Liberia

Sept 2025 - Dec 2025

- Collaborated with a team of three to build backend services for a real estate booking web application using Django REST Framework.
- Designed and documented secure REST API endpoints to support future mobile and web client integration.
- Implemented database models and serializers to support property listings, bookings and user workflows.

Projects

Personal Portfolio Web Page (HTML & CSS)

Personal Project

- Built a personal portfolio web page using HTML and CSS to showcase my academic and personal projects.

Django Product Inventory web app (Python - Django Framework, HTML & CSS)

Personal Project

- Developed a full-stack inventory management web application using Django with responsive HTML and CSS interfaces.
- Designed database models and implemented CRUD functionality for products using Django ORM.

Simple Calculator (Python)

Personal Project

- Developed a command-line calculator with modular structure and reusable functions.
- Handled user input validation and control flow.
- Currently refactoring the project toward a graphical user interface(GUI) to enhance user experience.

Simple Spam Email Classification System (Java)

Academic Project

- Collaborated with a coursemate to build a Java application to classify emails as spam or non-spam using feature-based analysis.
- Implemented text processing including tokenization, lowercasing and stop-word removal to improve classification accuracy.
- Designed feature extraction logic and a distance-based classification approach to compare spam and non-spam models.
